

What does File Reporter do?

- Powerful and flexible reporting solution, capable of delivering easy to read and in-depth reports, allowing you to hone in on what's important
- Gain key insights into the makeup of your file data, from trends to costs and risk
- Understanding the makeup of the data is critical for project planning and long term capacity allocation
- Instead of waiting to reach capacity or guessing at future storage needs, you can forecast accurately and save money
- Have the ability to spot patterns across platforms and data storage types
- Control the means to allocate costs, generate bills, and create financial models to control the cost of storage growth

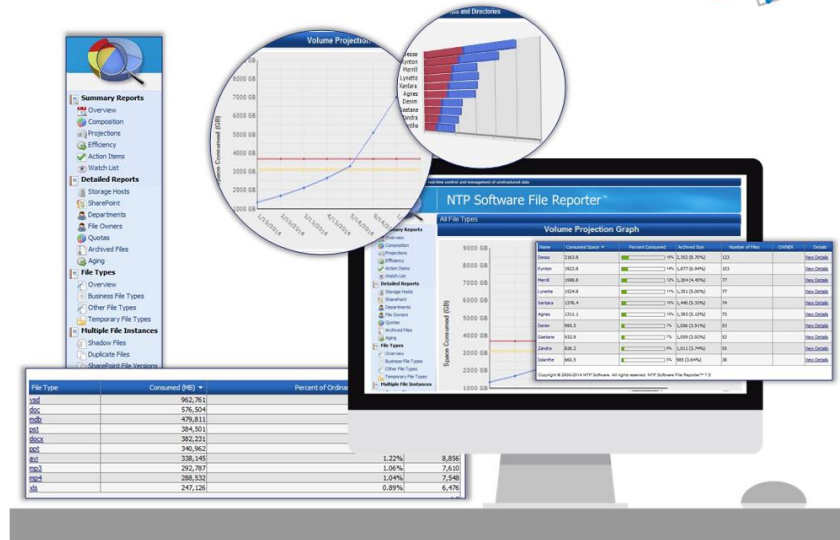

Why do you care?

- You can't make business decisions without hard data about your storage environment
- Control over your file data storage costs is critical and you want to ensure only the correct file types live on your systems

How are we different?

- **Focus** - we provide enterprise class solutions that can support multiple data centers and thousands of users
- **Patents** - we created and patented the core technologies that allow you to understand, manage and control your file data
- **No Lock In** - we are committed to open solutions and not proprietary implementations

Answers, Not Just Data

NEW RULES FOR FILE DATA™

Doc#4054EF Rev2.0

Product Features & Solutions

- **Critical Insights:** gain knowledge about most common file types, the overall makeup of your storage discs, which files are least useful, and a variety of other metrics
- **Flexible Reporting:** customize reports by users, departments, accessibility, growth, deletion, etc. to view your environment from multiple decision-making angles
- **Environment Trends:** trends are broken down into two major categories: how much storage space you will need and when you will need it in the future so you can operate and make decisions more effectively
- **Storage Planning:** from 50 Terabytes for a small business to 50 Petabytes for a large enterprise, storage purchasing decisions are justified through scientific data
- **Budget Effectively:** determine required resources for growing teams and environments that fit well into your company's financial model and individual needs

Supported Systems & Environments

- CIFS (Generic)
- Dell Compellent
- Dell EqualLogic
- EMC Celerra
- EMC Isilon
- EMC VNX
- HP LeftHand
- IBM N-Series
- NetApp 7.x
- NetApp FAS
- Netpp CDOT
- NFS (Generic)
- Windows DAS/SAN
- ...and many more
